

CERTIFICATE OF EVALUATION
for
RANDOM NUMBER GENERATOR & ASSOCIATED COMPONENTS

Random number generator

The random number generator (RNG) and shuffling algorithms used to create outcomes for multi-player poker is a component of PKR Limited's systems. The RNG has been evaluated by Gaming Associates. At the time of evaluation the RNG was used for providing appropriately shuffled cards for the poker games.

The evaluation comprising statistical testing and code inspection found that:

- ♠ the RNG generated results which were uniformly distributed and statistically independent; and
- ♠ card results for the *Texas Holdem*, *Omaha*, and *Omaha Hi/Lo* games were fair and not predictable.

The Crunchy Frog, multi-player poker software has been fingerprinted to enable on-going verification that the RNG in use is identical to the RNG evaluated. The software is verified against the fingerprint periodically.

The current validity of this certificate may be verified by viewing the original at the Gaming Associates web site: www.gamingassociates.com.

Disclaimer

Gaming Associates has conducted a level of evaluation, which has historically been adequate for a limited component evaluation of this type (specifically by the Alderney Gambling Control Commission). However, inherent in testing in a laboratory environment is the unavoidable limitation of it not being possible to verify the effects of all possible configurations that occur at the actual site.
