CERTIFICATE OF CONTINUOUS EVALUATION
for
RANDOM NUMBER GENERATOR & ASSOCIATED COMPONENTS

September 2008

Random number generator and shuffling

The random number generator (RNG) and shuffling algorithms used to create outcomes for multi-player poker, embedded Blackjack, and Deal Or No Deal games are components of PKR Limited's systems. The RNG has been evaluated by Gaming Associates. At the time of evaluation, and during the month of September 2008, the RNG was used to provide appropriately shuffled cards and numbers for poker, embedded Blackjack, and Deal Or No Deal games.

The evaluation comprising statistical testing and code inspection found that:

- ♣ the RNG generated results which were uniformly distributed and statistically independent; and
- ♣ game results for the *Texas Holdem*, *Omaha*, *embedded Blackjack*, and *Deal Or No Deal* games were fair and not predictable.

Gaming Associates has verified that the RNG in use is identical to the RNG evaluated and the RNG and shuffling algorithms are continuing to perform as designed and evaluated throughout the month of September 2008.
